## *Pain Clinic Monitor* *A Developing Opportunity....*

- Pain control has become a high priority due to the rise in patient expectations for quality of life.
- The increasingly chronic nature of many diseases has expanded the need for ongoing pain control.
- In response, growth in the number of Pain Clinics has been significant:
  - Today there are more than 2000 free-standing and university-based clinics in the US, up from just 500 in 1998.
- Pain Clinics are an identifiable and important cluster of:
  - *Prescribing intensity, and*
  - *Prescription initiation.*
- Pain Clinic Monitor presents you with a significant opportunity to receive actionable findings, useful for:
  - More effective targeted promotional and professional education activities.

## *Pain Clinic Facts*

### *Did you know ....*

- Physician Referrals comprise the majority (>90%) of patients treated at Pain Clinics.
  - Pain Clinicians are key early adopters and important “Rx Initiators”
- Five chronic pain indications comprise more than 75% of patients treated by Pain Specialists:

Low Back Pain	Neuropathic Pain	Cancer Pain
Spinal Pain		Neck Pain

- A monthly average of 400 Chronic Pain patients are seen in Pain Clinics.
- Oral Opioids are prescribed for the majority (>70%) of Chronic Pain Clinic patients....
  - Pain Management Specialists have a broad base of prescribing experience, and are very interested in new products and developments in pain treatment.
- The majority of Pain Clinics treat Low Back Pain, Neuropathic Pain and Cancer Pain.
